Ensemble Learning: Bagging and Random Forest

Muskan Jain, Rahul Kashyap, Priyanshu Singh

October 22, 2019

Ensemble methods in machine-learning are a kind of meta-algorithms that make use of other machine learning algorithms as a component to learn a collection of predictors. Ensemble learning takes the attitude that more predictors can be better than any single one and by learning many we can do a better job. We focus on **Bagging** and **Random Forest.**
